

Music Coast Artist Overview

Open to artists. Verification protects profiles, rights, uploads, and monetization eligibility.

Music Coast is an indie-first music streaming app built for artists who want streaming, discovery, artist profiles, media coverage, fan support, and clearer monetization tools in one place. Artists can join Music Coast and complete verification steps when needed for profile control, release review, rights-sensitive features, territory availability, or monetization eligibility.

App availability

Music Coast is live on iOS and Android. Artists can create an account, explore the app, and begin building their Music Coast presence.

Licensing/reporting coverage

United States	The MLC for eligible digital audio mechanical royalties, plus U.S. performance licensing coverage through ASCAP, BMI, SESAC, and GMR.
Mexico	SACM/EMMAC-SACM coverage for covered rights, repertoire, and eligible usage. Royalty flows may depend on rights, metadata, repertoire, territory, usage type, and registrations.
Selected territories	ICE coverage for selected international territories and covered repertoire/rights as Music Coast continues expanding licensing/reporting coverage.

Important: licensing/reporting coverage is not a global blanket-license claim. Royalty flows depend on the right, territory, repertoire, metadata, usage type, and rights-holder registration.

Monetization summary

For eligible ad-supported monetization, Music Coast uses an 80/20 split on net ad revenue attributed to eligible artist content. 80% goes to the artist/rightsholder and 20% is retained by Music Coast.

Net ad revenue means ad revenue received after applicable deductions such as ad network fees, invalid traffic, refunds, chargebacks, taxes, payment processing fees, platform fees, and other required deductions.

Coins/tokens are artist-support tools where enabled and are separate from royalties. They may be subject to platform fees, taxes, refunds, chargebacks, and payout eligibility rules.

Artists keep ownership

Uploading to Music Coast does not transfer ownership of songs, recordings, artwork, or brand assets. Artists grant Music Coast a non-exclusive license only so the platform can host, stream, cache, display, promote, and operate the music inside the Music Coast service.

Artist verification

Joining Music Coast is open. Verification helps protect artists, labels, rightsholders, and listeners by confirming who controls a profile, release, or catalog before uploads, rights-sensitive features, or monetization are enabled.

Submit artist, rightsholder, label, manager, distributor, publisher/admin, or authorized representative details when verification is requested or needed.

Upload checklist

- Artist name
- Legal/rightsholder name
- Contact email
- Audio files
- Cover artwork
- Track titles
- ISRCs
- UPC if available
- Release date
- Explicit/clean tags
- Featured artists
- Producer credits
- Writer credits
- Publisher/admin information
- Master owner
- Publishing split information
- PRO/CMO affiliation
- The MLC status where applicable
- SACM/EMMAC-SACM information for Mexico where applicable
- SoundExchange or neighboring-rights registration where applicable
- Proof of rights for samples, covers, remixes, DJ mixes, or third-party material
- Payment/tax information when monetization is enabled

Mexico artist resource path

- INDAUTOR — copyright registration and author-rights resources.
- SACM — author/composer membership, work registration, licensing, repertoire, and royalty resources.
- EMMAC-SACM — digital licensing/tariff resources for covered Mexican music-use licensing structures.
- AMPROFON — ISRC services for identifying recordings and videos.
- IMPI / MARCia — artist name, band name, logo, and brand trademark research.
- ANDI / EJE — performer/interpreter and executant rights paths.
- SOMEXFON — resources for certain recording/rightsholder public-use royalty paths.
- SAT — RFC and Constancia de Situación Fiscal readiness for payouts or invoicing.

AI content and authenticity

Music Coast may review AI-generated, AI-assisted, synthetic voice, cloned voice, deepfake, or authenticity-sensitive content. Uploaders must have the rights and permissions needed for the music, voice, likeness, artwork, metadata, and training/source materials involved.
